Mr. Tommy Wright
Staff Forester, Code 2432
Naval Facilities Engineering Command
Washington Navy Yard
1314 Harwood Street, SE
Washington, DC 20374

Dear Mr. Wright:

On June 9-13, 2004, I conducted aerial surveys for gypsy moth-caused tree defoliation at the Annapolis Navy Academy and Reservation, Pomonkey, Maryland Point, Blossom Point, Naval Observatory, National Naval Medical Center (Bethesda) and D.W. Taylor Naval Ship Research and Development Center (Carderock and Annapolis). I am pleased to report that no defoliation was detected at, or in the vicinity of, your sites.

However, if you anticipate requesting either financial or technical assistance for gypsy moth control in 2005, please contact Brad Onken (304) 285-1546 or me (304) 285-1555 before August 27, 2004.

I have also enclosed a pest alert on the emerald ash borer, *Agrilus planipennis*. This exotic beetle feeds on various species of ash and is a major threat to the ash resource of the region. Emerald ash borer has been detected in areas of Ohio, Michigan, Virginia and Maryland. The two most common ways of spreading emerald ash borer is through the movement of infested nursery stock or through the movement of infested fire wood. Additional information on emerald ash borer can be found at www.na.fs.fed.us/spfo/eab.

Please contact me at the above number if you have any questions regarding this aerial survey letter or emerald ash borer.

Sincerely,

RODNEY L. WHITEMAN
